

Net Zero timeline 2022 - 2050

MILLS & REEVE
Achieve more. Together.

Committed to have our targets validated by the Science Based Targets Initiative (SBTi).

2022

Completed our baseline emissions calculation in accordance with the requirements of the relevant net zero protocol.

2023

Submitted our emissions reduction targets for validation to the SBTi.

2024

Aim for a 55% reduction in scopes 1 and 2, compared to 2023 baseline, and a 33% reduction in scope 3, compared to 2023 baseline.

2033

Achieve at least 90% reduction across all our emissions, including scope 3.

2050

- Annual carbon reporting is the foundation of Mills-Reeve's Net Zero plan. All of our GHG data can be found here <https://www.mills-reeve.com/about-us/our-commitment-to-net-zero>
- Our carbon footprint has been calculated on the Net Zero Now platform in accordance with the Greenhouse Gas Protocol Corporate Standard (GHG), an international standard widely regarded as best practice for accounting and reporting.
- At present we don't purchase any carbon offsets - once we reach our long-term reduction target, we commit to purchase certified carbon offsets equivalent to our remaining emissions.
